1. Introduction

The information model defines a set of classes and data types in an abstract way. When faced with the real task of communicating data between systems these abstract concepts need to be bound to some *physical* representation, such as a stream of bytes in a computer file.

The document describes the required method of binding the information model when the *physical* representation is an XML Document. The binding rules are given primarily in the form of an XML Schema with the following target namespace: http://www.imsglobal.org/xsd/imsqti_v2p0. To assist developers who wish to check the validity of QTI XML documents using tools that support document type definitions (DTDs) the binding rules are also represented as a DTD, however, the DTD is not able to express all the constraints contained in the schema and document instances should validate against the schema. QTI document instances *must* validate against one of the schema or DTD.

2. Binding of Complex Types

Complex types, those that contain other objects through composition and/or have attributes, are represented in the schema as elements with complex content in a straightforward way. Classes that are used as base classes (typically labeled *abstract* in the model) are used to define an element group consisting of a single choice listing all the non-abstract classes derived from them. Classes with attributes are used to define attribute groups and those that contain other objects (including through inheritance) are used to define element groups describing them.

Elements defined by [XHTML] are *not* imported directly from an external schema but are instead re-declared as part of the QTI schema. At the time of writing the use of schema for XHTML is at an experimental stage. However, the math element defined by [MathML] *is* imported from the MathML schema. Note that the use of the MathML schema excludes the use of the entity declarations for mathematical symbols defined in the original MathML DTD and therefore these should not be used for referring to characters within QTI document instances.

3. Binding of Simple Types

Simple datatypes are bound directly to the closest equivalent type in XML Schema, for example, boolean is bound directly to xsd:boolean. Enumerations are bound as enumerated restrictions of xsd:NMTOKEN.

The information model says nothing about how simple types are to be represented in text. For example, the boolean type is an abstract boolean which can be either logically true or logically false. By binding these simple types using XML Schema they automatically inherit the lexical bindings described there. A lexical binding is just a set of rules for representing the abstract type as a run of text characters. For example, XML Schema allows the following strings to represent the values of xsd:boolean: "true", "false", "1" and "0".

XML DTDs have a smaller vocabulary for defining simple types and is therefore not able to impose the same lexical constraints as the schema. Applications that generate QTI document instances that validate against the DTD must still use the same lexical bindings defined by schema even though these will not be checked automatically by the XML parser. For example, in the DTD the boolean type is bound only to NMTOKEN and therefore the XML parser will permit many more strings than the four listed above. However, strings such as "yes" and "no" are still forbidden.

4. XML Binding Reference

4.1 <a>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

4.6 <and>

Description: An expression that performs a boolean and.

Context:

See:

• expression.ElementGroup

Elements:

• Members of expression. Element Group

4.7 <anyN>

Description: An expression for testing groups of boolean sub-expressions.

Context:

See:

• expression.ElementGroup

Attributes:

- **min** (**required**). Data type = integer. Type
- max (required). Data type = integer. Type

Elements:

Members of expression.ElementGroup

4.8 <areaMapEntry>

Description: Defines an area for mapping a set of points onto a single real number.

Context:

• Occurs [1..*] within areaMapping

Attributes:

- **shape** (**required**). Data type = shape.Type
- **coords** (**required**). Data type = coords.Type
- mappedValue (required). Data type = float.Type

4.9 <areaMapping>

Description: Defines a mapping from the set of points to real numbers using areas.

Context:

• Occurs [0..1] within responseDeclaration

Attributes:

• **lowerBound** (**optional**). Data type = float.Type

- **upperBound** (**optional**). Data type = float.Type
- **defaultValue** (**required**). Data type = float.Type

Elements:

<areaMapEntry>

4.10 <assessmentItem>

Description: The root element for QTI items

Context:

Can be the root element of an XML document.

Attributes:

- **identifier** (**required**). Data type = string.Type
- **title** (**required**). Data type = string.Type
- **label** (**optional**). Data type = string256.Type
- xml:lang (optional).
- adaptive (required). Data type = boolean. Type
- **timeDependent** (**required**). Data type = boolean.Type
- **toolName (optional)**. Data type = string256.Type
- **toolVersion** (**optional**). Data type = string256.Type

Elements:

- <responseDeclaration>
- <outcomeDeclaration>
- <templateDeclaration>
- <templateProcessing>
- <stylesheet>
- <itemBody>
- <responseProcessing>
- <modalFeedback>

4.11 associableChoice.ElementGroup

Description: The group of elements that are used in association-type interactions.

Group members: <associableHotspot>, <gap>, <gapImg>, <gapText>, <simpleAssociableChoice>

Context:

Not applicable.

4.12 <associableHotspot>

Description: An element that defines a hot area of a graphic for association tasks.

Context:

- Occurs [1..*] within graphicAssociateInteraction
- Occurs [1..*] within graphicGapMatchInteraction

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed (optional)**. Data type = boolean.Type
- matchGroup (optional). Data type = list of identifier. Type
- **shape** (**required**). Data type = shape.Type
- **coords** (**required**). Data type = coords. Type
- **hotspotLabel** (**optional**). Data type = string256.Type
- matchMax (required). Data type = integer.Type

4.13 <associateInteraction>

Description: Interaction in which the candidate must identify pairs of choices from a single set.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- **shuffle** (**required**). Data type = boolean.Type
- maxAssociations (required). Data type = integer. Type

Elements:

- cprompt>
- <simpleAssociableChoice>

4.14 atomicBlock.ElementGroup

Description: A group of elements that provide structure but that can only contain elements behaving like spans of text.

Group members: <address>, <h1>, <h2>, <h3>, <h4>, <h5>, <h6>, ,

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup

• objectFlow.ElementGroup

4.15 atomicInline.ElementGroup

Description: A group of empty elements that behave like spans of text

Group members:
,

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

4.16

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256. Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.17 <bankProfile>

Description: An element for describing the capabilities or requirements of an item-bank system.

Context:

Can be the root element of an XML document.

Elements:

- <usageDataVocabulary>
- <metadataProfile>
- Elements from other namespaces

4.18 baseType.Type

One of the following symbolic values:

- boolean
- · directedPair
- duration
- file
- float
- identifier
- integer
- pair
- point
- string
- uri

4.19

 daseValue>

Description: A simple expression returning a constant value of the given base-type.

Context:

See:

· expression.ElementGroup

Attributes:

• **baseType** (**required**). Data type = baseType.Type

4.20 <big>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass.Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.21 block.ElementGroup

Description: A group of elements that provide structure to the item body.

Group members: <address>, <associateInteraction>, <blockquote>, <choiceInteraction>, <customInteraction>, <div>, <dl>, <drawingInteraction>, <extendedTextInteraction>, <feedbackBlock>, <gapMatchInteraction>, <graphicAssociateInteraction>, <graphicGapMatchInteraction>, <graphicOrderInteraction>, <h1>, <h2>, <h3>, <h4>, <h5>, <h6>, <hotspotInteraction>, <hottextInteraction>, <m:math>, <matchInteraction>, , <orderInteraction>, , <positionObjectStage>, , <rubricBlock>, <selectPointInteraction>, <sliderInteraction>, , <templateBlock>, , <up>, <

Context:

- Occurs [*] within itemBody
- Occurs [*] within members of simpleBlock.ElementGroup

4.22 blockInteraction.ElementGroup

Description: The group of interactions which have inherent structure of their own.

Group members: <associateInteraction>, <choiceInteraction>, <drawingInteraction>, <extendedTextInteraction>, <gapMatchInteraction>, <graphicAssociateInteraction>, <graphicGapMatchInteraction>, <orderInteraction>, <state="final-red">, <orderInteraction>, <orderInteraction>, <order

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

4.23 blockStatic.ElementGroup

Description: A group of elements that provide structure excluding interactions.

 $\label{lock-seq} \textbf{Group members:} < \text{address>}, < \text{blockquote>}, < \text{div>}, < \text{dl>}, < \text{feedbackBlock>}, < \text{h1>}, < \text{h2>}, < \text{h3>}, < \text{h4>}, < \text{h5>}, < \text{h6>}, < \text{hr>}, < \text{m:math>}, < \text{ol>}, < \text{p>}, < \text{pre>}, < \text{rubricBlock>}, < \text{table>}, < \text{templateBlock>}, < \text{ul>}$

Context:

- Occurs [1..*] within gapMatchInteraction
- Occurs [1..*] within hottextInteraction
- Occurs [*] within templateBlock

See:

block.ElementGroup

4.24 <blockquote>

Description: Defined by XHTML

Context:

See:

block.ElementGroup

- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **cite** (**optional**). Data type = uri.Type

Elements:

Members of block.ElementGroup

4.25 bodyElement.ElementGroup

Description: The group of elements used to describe the structure, material and interactions within the item body.

Group members: <a>, <abbr>, <acronym>, <address>, <associableHotspot>, <associateInteraction>, , <big>, <blookquote>,
, <caption>, <choiceInteraction>, <cite>, <code>, <col>, <colgroup>, <customInteraction>,
, <dd>, <dfn>, <div>, <dl>, <drawingInteraction>,
, , <endAttemptInteraction>, <extendedTextInteraction>, <feedbackBlock>, <feedbackInline>, <gap>, <gapImg>, <gapMatchInteraction>, <gapText>, <graphicAssociateInteraction>, <graphicGapMatchInteraction>, <graphicOrderInteraction>, <h1>, <h2>, <h3>, <h4>, <h5>, <h6>, <hotspotChoice>, <hotspotInteraction>, <hottext>, <hottextInteraction>, <hr>, <inlineChoice>, <inlineChoiceInteraction>, <itemBody>, <kbd>, , <matchInteraction>, <olp>, <orderInteraction>, , <positionObjectInteraction>, , <pri>, , <pri>, ,

Context:

Not applicable.

4.26 boolean. Type

A trivial restriction of xsd:boolean.

4.27 <br

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

4.28 <caption>

Description: Defined by XHTML

Context:

• Occurs [0..1] within table

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.29 cardinality. Type

One of the following symbolic values:

- multiple
- ordered
- · record
- single

4.30 <categorizedStatistic>

Description: A categorized statistic, such as a score-conversion table, expressed as a mapping.

Context:

See:

• itemStatistic.ElementGroup

Attributes:

- **name** (**required**). Data type = identifier. Type
- **glossary** (**optional**). Data type = uri.Type
- **context** (**required**). Data type = uri.Type
- caseCount (optional). Data type = integer. Type
- **stdError** (**optional**). Data type = float.Type
- **stdDeviation (optional)**. Data type = float.Type
- **lastUpdated** (**optional**). Data type = date.Type

Elements:

- <targetObject>
- <mapping>

4.31 choice.ElementGroup

Description: The group of elements that provide choices from which the candidate may select a response.

Group members: <associableHotspot>, <gap>, <gapImg>, <gapText>, <hotspotChoice>, <hottext>, <inlineChoice>, <simpleAssociableChoice>, <simpleChoice>

Context:

Not applicable.

4.32 <choiceInteraction>

Description: The element that represents simple multiple choice and multiple-response interactions.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- responseIdentifier (required). Data type = identifier.Type
- **shuffle** (**required**). Data type = boolean.Type
- maxChoices (required). Data type = integer. Type

Elements:

- prompt>
- <simpleChoice>

4.33 <cite>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.34 <code>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.35 <col>

Description: Defined by XHTML

Context:

- Occurs [*] within colgroup
- Occurs [*] within table

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label (optional)**. Data type = string256.Type

4.36 <colgroup>

Description: Defined by XHTML

Context:

• Occurs [*] within table

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

<col>

4.37 <composite>

Description: Profile flag for the composite items feature.

Context:

- Occurs [1] within contentProfile
- Occurs [0..1] within qtiMetadata

4.38 <contains>

Description: An expression that tests a container to determine if it contains another.

Context:

See:

· expression.ElementGroup

Elements:

• Members of <u>expression.ElementGroup</u>

4.39 <contentProfile>

Description: An element for describing the capabilities or requirements of a system that handles QTI content.

Context:

Can be the root element of an XML document.

Elements:

- <composite>
- <adaptive>
- <timeDependent>
- <templates>
- <textElements>
- listElements>
- <objectElements>
- <objectType>
- presentationElements>
- <tableElements>

- <imageElement>
- <imageType>
- <hypertextElement>
- <mathElement>
- <mathVariable>
- <feedbackIntegrated>
- <feedbackModal>
- <rubric>
- <printedVariables>
- <interactionType>
- <responseRules>
- <rpTemplate>
- <rounding>
- <regexp>
- <metadataProfile>
- Elements from other namespaces

4.40 coords.Type

A trivial restriction of xsd:string.

4.41 <correct>

Description: A simple expression returning the correct value associated with a response variable.

Context:

See:

• expression.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

4.42 <correctResponse>

Description: Declares the (or a) correct response for a response variable.

Context:

• Occurs [0..1] within responseDeclaration

Attributes:

• **interpretation (optional)**. Data type = string. Type

Elements:

<value>

4.43 < customInteraction>

Description: An element that allows extensions to QTI to be developed for interaction types not covered by the information model.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- Attributes from other namespaces

Elements:

• Elements from any namespace

4.44 <customOperator>

Description: An element allowing externally defined expressions to be used.

Context:

See:

· expression.ElementGroup

Attributes:

- class (optional). Data type = identifier. Type
- **definition** (**optional**). Data type = uri.Type
- Attributes from other namespaces

Elements:

Members of expression. Element Group

4.45 date.Type

A trivial restriction of xsd:date.

4.46 <dd>

Description: Defined by XHTML

Context:

See:

• dlElement.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type

- xml:lang (optional).
- label (optional). Data type = string256. Type

Elements:

- Members of flow.ElementGroup
- PCDATA

4.47 <default>

Description: A simple expression returning the default value of an item variable.

Context:

See:

· expression.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

4.48 <defaultValue>

Description: Defines the default value for an item variable.

Context:

• Occurs [0..1] within members of variableDeclaration. Element Group

Attributes:

• **interpretation (optional)**. Data type = string.Type

Elements:

<value>

4.49 <delete>

Description: An expression that derives a new container by removing a given value from an existing one.

Context:

See:

• expression.ElementGroup

Elements:

• Members of expression.ElementGroup

4.50 <dfn>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.51 <div>

Description: Defined by XHTML

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of flow.ElementGroup
- PCDATA

4.52 <divide>

Description: An expression for dividing one number by another.

Context:

See:

• expression.ElementGroup

Elements:

Members of expression. Element Group

4.53 <dl>

Description: Defined by XHTML

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

Members of dlElement.ElementGroup

4.54 dlElement.ElementGroup

Description: Elements that can appear within <dl>.

Group members: <dd>, <dt>

Context:

• Occurs [*] within dl

4.55 <drawingInteraction>

Description: Interaction in which the candidate draws freely on a given backdrop image.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type

Elements:

prompt>

<object>

4.56 <dt>

Description: Defined by XHTML

Context:

See:

• dlElement.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.57 <durationGTE>

Description: An expression for testing the greater-than-or-equal relation between two durations.

Context:

See:

· expression.ElementGroup

Elements:

• Members of expression.ElementGroup

4.58 <durationLT>

Description: An expression for testing the less-than relation between two durations.

Context:

See:

• expression.ElementGroup

Elements:

Members of expression. Element Group

4.59

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass.Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.60 <endAttemptInteraction>

Description: A special interaction for providing alternative ways to end an attempt.

Context:

See:

- flow.ElementGroup
- inline.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label (optional)**. Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- **title** (**required**). Data type = string. Type

4.61 <equal>

Description: An expression for testing two numeric values for equality.

Context:

See:

• expression.ElementGroup

Attributes:

- **toleranceMode** (**required**). Data type = toleranceMode.Type
- **tolerance** (**optional**). Data type = list of float.Type

Elements:

Members of expression.ElementGroup

4.62 <equalRounded>

Description: An expression for testing two numeric values for equality after rounding.

Context:

See:

· expression.ElementGroup

Attributes:

- roundingMode (required). Data type = roundingMode.Type
- **figures** (**required**). Data type = integer.Type

Elements:

Members of expression. Element Group

4.63 <exitResponse>

Description: A response rule that terminates response processing immediately.

Context:

See:

responseRule.ElementGroup

4.64 <exitTemplate>

Description: A template rule that terminates template processing immediately.

Context:

See:

• templateRule.ElementGroup

4.65 expression.ElementGroup

Description: The group of elements that are used to create expressions for setting variable values and controlling conditional groups of rules.

Group members: <and>, <anyN>, <baseValue>, <contains>, <correct>, <customOperator>, <default>, <delete>, <divide>, <durationGTE>, <durationLT>, <equal>, <equalRounded>, <fieldValue>, <gt>, <gte>, <index>, <inside>, <integerDivide>, <integerModulus>, <integerToFloat>, <isNull>, <lt>, <lte>, <mapResponse>, <mapResponsePoint>, <match>, <member>, <multiple>, <not>, <null>, <or>, <ordered>, <patternMatch>, <power>, , , <round>, <stringMatch>, <substring>, <subtract>, <sum>, <truncate>, <variable>

Context:

- maxStrings (optional). Data type = integer. Type
- **expectedLines** (**optional**). Data type = integer.Type

Elements:

prompt>

4.67 <feedbackBlock>

Description: A structural part of the item body whose visibility can be conditionally controlled by the current outcomes.

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **outcomeIdentifier** (**required**). Data type = identifier.Type
- showHide (required). Data type = showHide.Type
- **identifier** (**required**). Data type = identifier. Type
- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

Members of block.ElementGroup

4.68 feedbackElement.ElementGroup

Description: Elements whose visibility can be conditionally controlled depending on the current outcomes.

Group members: <feedbackBlock>, <feedbackInline>

Context:

Not applicable.

4.69 <feedbackInline>

Description: A span of text (or equivalent) whose visibility can be conditionally controlled by the current outcomes.

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **outcomeIdentifier** (**required**). Data type = identifier.Type
- **showHide** (**required**). Data type = showHide.Type
- **identifier** (**required**). Data type = identifier. Type
- **id** (**optional**). Data type = identifier. Type

- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.70 <feedbackIntegrated>

Description: Profile flag for the integrated feedback feature.

Context:

• Occurs [1] within contentProfile

4.71 <feedbackModal>

Description: Profile flag for the modal feedback feature.

Context:

• Occurs [1] within contentProfile

4.72 <feedbackType>

Context:

• Occurs [0..1] within qtiMetadata

Content: a value of type feedbackType.Type.

4.73 feedbackType.Type

One of the following symbolic values:

- adaptive
- nonadaptive
- none

4.74 <fieldValue>

Description: An expression that extracts a single field value from a record container.

Context:

See:

expression.ElementGroup

Attributes:

• **fieldIdentifier** (**required**). Data type = identifier. Type

Elements:

Members of expression. Element Group

4.75 float.Type

A trivial restriction of xsd:float.

4.76 flow.ElementGroup

Description: A group of elements that can appear in contexts where either further structure or spans of text are allowed.

Group members: <a>, <abbr>, <acronym>, <address>, <associateInteraction>, , <big>, <blockquote>,
, <choiceInteraction>, <cite>, <code>, <customInteraction>, <din>, <din>, <din>, <din>, <din>, <din>, <din>, <din>, <din>,
, <endAttemptInteraction>, <extendedTextInteraction>, <feedbackBlock>, <feedbackInline>, <gapMatchInteraction>, <graphicAssociateInteraction>, <graphicGapMatchInteraction>, <graphicOrderInteraction>, <h1>, <h2>, <h3>, <h4>, <h5>, <h6>, <hotspotInteraction>, <hottext>, <hottextInteraction>, <hr>, <inlineChoiceInteraction>, <kbd>, <m:math>, <matchInteraction>, <object>, , <orderInteraction>, , , <printedVariable>, <q>, <rubricBlock>, <samp>, <selectPointInteraction>, <sliderInteraction>, <tt>, <

Context:

- Occurs [*] within dd
- Occurs [*] within div
- Occurs [*] within li
- Occurs [*] within members of tableCell.ElementGroup

See:

• objectFlow.ElementGroup

4.77 flowStatic.ElementGroup

Description: A group of elements that can appear in contexts where either further structure or spans of text are allowed excluding interactions.

Group members: <a>, <abbr>, <acronym>, <address>, , <big>, <blockquote>,
, <cite>, <code>, <dfn>, <div>, <dl>, , <feedbackBlock>, <feedbackInline>, <h1>, <h2>, <h3>, <h4>, <h5>, <h6>, <hottext>, <hr>, <ii>, , <kbd>, <m:math>, <object>, , , , <printedVariable>, <q>, <rubricBlock>, <samp>, <small>, , , <sub>, <sub>, , <templateBlock>, <templateInline>, <tt>, , <var>

Context:

- Occurs [*] within modalFeedback
- Occurs [*] within simpleAssociableChoice
- Occurs [*] within simpleChoice

See:

- flow.ElementGroup
- objectFlow.ElementGroup

4.78 <gap>

Description: Defines the position of a gap in the text for gap-filling tasks.

Context:

See:

- inline.ElementGroup
- inlineStatic.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed (optional)**. Data type = boolean.Type
- matchGroup (optional). Data type = list of identifier. Type

4.79 gapChoice.ElementGroup

Description: A group of elements that can be used to define choices for gap-filling tasks.

Group members: <gapImg>, <gapText>

Context:

• Occurs [1..*] within gapMatchInteraction

4.80 <gapImg>

Description: An image that can be used to fill a gap.

Context:

• Occurs [1..*] within graphicGapMatchInteraction

See:

• gapChoice.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label (optional)**. Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed (optional)**. Data type = boolean.Type
- matchGroup (optional). Data type = list of identifier. Type
- matchMax (required). Data type = integer. Type
- **objectLabel** (**optional**). Data type = string.Type

Elements:

<object>

4.81 <gapMatchInteraction>

Description: An interaction in which the candidate fills gaps in a passage of text from a set of predefined choices.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- **shuffle** (**required**). Data type = boolean.Type

Elements:

- prompt>
- Members of gapChoice.ElementGroup
- Members of blockStatic.ElementGroup

4.82 <gapText>

Description: A simple run of text that can be used to fill a gap.

Context:

See:

• gapChoice.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed (optional)**. Data type = boolean.Type
- matchGroup (optional). Data type = list of identifier. Type
- matchMax (required). Data type = integer. Type

4.83 <graphicAssociateInteraction>

Description: Interaction in which the candidate associates pairs of pre-defined hotspots on an image.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label (optional)**. Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- maxAssociations (required). Data type = integer. Type

Elements:

- prompt>
- <object>
- <associableHotspot>

4.84 <graphicGapMatchInteraction>

Description: Interaction in which the candidate fills gaps within a given image, e.g., through drag-and-drop.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

• **responseIdentifier** (**required**). Data type = identifier.Type

Elements:

- cprompt>
- <object>
- <gapImg>
- <associableHotspot>

4.85 graphicInteraction.ElementGroup

Description: A group of elements for describing image-based tasks.

Group members: <graphicAssociateInteraction>, <graphicGapMatchInteraction>, <graphicOrderInteraction>, <hotspotInteraction>, <selectPointInteraction>

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

4.86 <graphicOrderInteraction>

Description: Interaction in which the candidate orders a set of predefined hotspots on an image.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier (required)**. Data type = identifier.Type

Elements:

- prompt>
- <object>
- <hotspotChoice>

4.87 <gt>

Description: An expression for testing the greater-than relation between two numbers.

Context:

See:

• expression.ElementGroup

Elements:

• Members of expression. Element Group

4.88 <gte>

• **Description:** An expression for testing the greater-than-or-equal relation between two numbers.

• objectFlow.ElementGroup

Attributes:

- name (required). Data type = string. Type
- value (required). Data type = string. Type
- **valuetype** (**required**). Data type = paramType.Type
- **type** (**optional**). Data type = mimeType.Type

4.163 paramType.Type

One of the following symbolic values:

- DATA
- REF

4.164 <patternMatch>

Description: An expression for testing two string values using regular expressions.

Context:

See:

• expression.ElementGroup

Attributes:

• pattern (required). Data type = string. Type

Elements:

• Members of expression. Element Group

4.165 <positionObjectInteraction>

Description: Interaction in which the candidate must position objects over an existing image.

Context:

• Occurs [1..*] within positionObjectStage

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier (required)**. Data type = identifier.Type
- **centerPoint** (**optional**). Data type = list of integer. Type
- maxChoices (required). Data type = integer. Type

Elements:

<object>

4.166 <positionObjectStage>

Description: Defines the background image to be used for positioning object tasks.

Context:

See:

• block.ElementGroup

Elements:

- <object>
- <positionObjectInteraction>

4.167 <power>

Description: An expression for raising one number to the power of another.

Context:

See:

• expression.ElementGroup

Elements:

Members of expression. Element Group

4.168

Description: Defined by XHTML

Context:

See:

block.ElementGroup

- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- label (optional). Data type = string256. Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.169 <

Description: Profile flag for the XHTML presentation elements.

Context:

• Occurs [1] within contentProfile

4.170 <pri>delighted variable

Description: An element used to insert the value of an item variable into the item body.

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256. Type
- **identifier** (**required**). Data type = identifier. Type
- **format (optional)**. Data type = string256.Type
- **base** (**optional**). Data type = integer. Type

4.171 <pri>dVariables>

Description: Profile flag for the printed Variable feature.

Context:

Occurs [1] within contentProfile

4.172 coduct >

Description: An expression for calculating the product of a group of numbers.

Context:

See:

• expression.ElementGroup

Elements:

• Members of expression. Element Group

Description: An optional prompt for an interaction.

Context:

• Occurs [0..1] within members of blockInteraction. Element Group

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inlineStatic.ElementGroup
- PCDATA

4.174 <q>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **cite** (**optional**). Data type = uri.Type

Elements:

• Members of inline.ElementGroup

PCDATA

4.175 <qtiMetadata>

Description: The root element for QTI-specific meta-data. Typically used within a manifest file in an IMS content package.

Context:

Can be the root element of an XML document.

Elements:

- <itemTemplate>
- <timeDependent>
- <composite>
- <interactionType>
- <feedbackType>
- <solutionAvailable>
- <toolName>
- <toolVersion>
- <toolVendor>

4.176 < random >

Description: An expression that extracts a random value from a container.

Context:

See:

· expression.ElementGroup

Elements:

Members of expression. Element Group

4.177 < random Float >

Description: An expression that returns a random float from the specified range.

Context:

See:

• expression.ElementGroup

Attributes:

- **min** (**required**). Data type = float.Type
- max (required). Data type = float. Type

4.178 < randomInteger>

Description: An expression that returns a random integer from the specified range.

Context:

See:

· expression.ElementGroup

Attributes:

- **min** (**required**). Data type = integer. Type
- max (required). Data type = integer. Type
- **step (optional)**. Data type = integer.Type

4.179 < regexp>

Description: Profile flag for the regular-expression feature.

Context:

• Occurs [1] within contentProfile

4.180 < response Condition >

Description: A response rule that contains groups of sub-rules which are followed conditionally based on the value of one or more expressions.

Context:

See:

responseRule.ElementGroup

Elements:

- <responseIf>
- <responseElseIf>
- <responseElse>

4.181 <responseDeclaration>

Description: Declares a response variable.

Context:

• Occurs [*] within assessmentItem

Attributes:

- **identifier** (**required**). Data type = identifier. Type
- cardinality (required). Data type = cardinality. Type
- **baseType** (**optional**). Data type = baseType.Type

- <defaultValue>
- <correctResponse>
- <mapping>
- <areaMapping>

4.182 <responseElse>

Description: A final group of rules to be followed unconditionally if all previous groups have been skipped for the containing response condition.

Context:

• Occurs [0..1] within responseCondition

Elements:

• Members of responseRule.ElementGroup

4.183 <responseElseIf>

Description: A conditional group of rules to be considered if all previous groups have been skipped for the containing response condition.

Context:

• Occurs [*] within responseCondition

Elements:

- Members of expression. Element Group
- Members of responseRule.ElementGroup

4.184 <responseIf>

Description: The first part of a response condition.

Context:

· Occurs [1] within responseCondition

Elements:

- Members of expression. Element Group
- Members of responseRule.ElementGroup

4.185 <responseProcessing>

Description: Defines the rules used to process the candidate's responses.

Context:

• Occurs [0..1] within assessmentItem

Can be the root element of an XML document.

Attributes:

- **template** (**optional**). Data type = uri.Type
- **templateLocation** (**optional**). Data type = uri.Type

Elements:

• Members of responseRule.ElementGroup

4.186 responseRule.ElementGroup

Description: A group of elements that define rules to be followed during response processing.

Group members: <exitResponse>, <responseCondition>, <setOutcomeValue>

Context:

- Occurs [*] within responseElse
- Occurs [*] within responseElseIf
- Occurs [*] within responseIf
- Occurs [*] within responseProcessing

4.187 <responseRules>

Description: Profile flag for the general response processing feature.

Context:

• Occurs [1] within contentProfile

4.188 < round>

Description: An expression for rounding a real number to an integer.

Context:

See:

• expression.ElementGroup

Elements:

Members of expression. Element Group

4.189 < rounding >

Context:

• Occurs [1] within contentProfile

4.190 roundingMode.Type

One of the following symbolic values:

- decimalPlaces
- · significantFigures

4.191 <rpTemplate>

Description: Profile element for identifying a specific response processing template.

Context:

• Occurs [*] within contentProfile

4.192 <rubric>

Description: Profile flag for the rubric feature.

Context:

• Occurs [1] within contentProfile

4.193 <rubricBlock>

Description: A structural part of the item body whose visibility depends on the role of the person viewing the item, typically containing instructions to a specific actor.

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **view** (**required**). Data type = list of view.Type

Elements:

• Members of block.ElementGroup

4.194 <samp>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

- Members of inline.ElementGroup
- PCDATA

4.195 <selectPointInteraction>

Description: Interaction in which the candidate selects one or more points on an image.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- maxChoices (required). Data type = integer. Type

Elements:

- prompt>
- <object>

4.196 <setCorrectResponse>

Description: A template rule that sets the correct value of a response variable.

Context:

See:

• templateRule.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier.Type

Elements:

• Members of expression. Element Group

4.197 <setDefaultValue>

Description: A template rule that sets the default value of an item variable.

Context:

See:

• templateRule.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

Elements:

• Members of expression. Element Group

4.198 <setOutcomeValue>

Description: A response rule that sets the value of an outcome variable.

Context:

See:

· responseRule.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

Elements:

• Members of expression. Element Group

4.199 <setTemplateValue>

Description: A template rule that sets the value of a template variable.

Context:

See:

• templateRule.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

Elements:

• Members of expression. Element Group

4.200 shape. Type

One of the following symbolic values:

- circle
- default
- ellipse
- poly
- rect

4.201 showHide.Type

One of the following symbolic values:

- hide
- show

4.202 sign.Type

A trivial restriction of xsd:string.

4.203 <simpleAssociableChoice>

Description: The element used to describe the choices in simple association or matching tasks.

Context:

- Occurs [1..*] within associateInteraction
- Occurs [*] within simpleMatchSet

Attributes:

- **id** (**optional**). Data type = identifier.Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed (optional)**. Data type = boolean.Type
- matchGroup (optional). Data type = list of identifier. Type
- matchMax (required). Data type = integer. Type

Elements:

- Members of flowStatic.ElementGroup
- PCDATA

4.204 simpleBlock.ElementGroup

Description: A group of elements that provide simple aggregating structure to the item body.

Group members: <blockquote>, <feedbackBlock>, <rubricBlock>

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

4.205 <simpleChoice>

Description: The element used to describe the choices in simple selection or ordering tasks.

Context:

- Occurs [1..*] within choiceInteraction
- Occurs [1..*] within orderInteraction

Attributes:

• **id** (**optional**). Data type = identifier. Type

- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **identifier** (**required**). Data type = identifier. Type
- **fixed** (**optional**). Data type = boolean.Type

Elements:

- Members of flowStatic.ElementGroup
- PCDATA

4.206 simpleInline.ElementGroup

Description: A group of elements that both behave as and contain things that behave like spans of text.

Group members: <a>, <abbr>, <acronym>, , <big>, <cite>, <code>, <dfn>, , <feedbackInline>, <i>, <kbd>, <q>, <samp>, <small>, , , <sub>, <tt>, <var>

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

4.207 <simpleMatchSet>

Description: Describes a set of choices for use in a matching task.

Context:

• Occurs [2] within matchInteraction

Elements:

<simpleAssociableChoice>

4.208 <sliderInteraction>

Description: Interaction in which the candidate uses a slider to enter a constrained numeric response.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).

- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- lowerBound (required). Data type = float.Type
- **upperBound** (**required**). Data type = float.Type
- **step** (**optional**). Data type = integer.Type
- **stepLabel** (**optional**). Data type = boolean. Type
- **orientation** (**optional**). Data type = orientation. Type
- **reverse** (**optional**). Data type = boolean.Type

Elements:

prompt>

4.209 <small>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.210 <solutionAvailable>

Description: A meta-data flag indicating that the item contains a solution.

Context:

• Occurs [0..1] within qtiMetadata

4.211

Description: Defined by XHTML

Context:

See:

• flow.ElementGroup

- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup

- Occurs [1] within contentProfile
- Occurs [0..1] within qtiMetadata

4.248 toleranceMode.Type

One of the following symbolic values:

- absolute
- exact
- relative

4.249 <toolName>

Description: A meta-data element containing the name of the tool used to create the object.

Context:

• Occurs [0..1] within qtiMetadata

4.250 <toolVendor>

Description: A meta-data element containing the name of the company that produced the tool used to create the object.

Context:

• Occurs [0..1] within qtiMetadata

4.251 <toolVersion>

Description: A meta-data element containing the version of the tool used to create the object.

Context:

• Occurs [0..1] within qtiMetadata

4.252

Description: Defined by XHTML

Context:

- Occurs [1..*] within tbody
- Occurs [1..*] within thead

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

• Members of tableCell.ElementGroup

4.253 <truncate>

Description: An expression for truncating a real number to an integer.

Context:

See:

• expression.ElementGroup

Elements:

• Members of expression. Element Group

4.254 <tt>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

- Members of inline.ElementGroup
- PCDATA

4.255

Description: Defined by XHTML

Context:

See:

- block.ElementGroup
- blockStatic.ElementGroup
- flow.ElementGroup
- flowStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

<

4.256 <uploadInteraction>

Description: Interaction in which the candidate uploads a file representing their response.

Context:

See:

- block.ElementGroup
- flow.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class (optional)**. Data type = list of styleclass. Type
- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type
- **responseIdentifier** (**required**). Data type = identifier.Type
- **type** (**optional**). Data type = mimeType.Type

Elements:

prompt>

4.257 uri.Type

A trivial restriction of xsd:anyURI.

4.258 <usageData>

Description: The root element of a usage data XML document instance. Usage data are also referred to as item statistics.

Context:

Can be the root element of an XML document.

Attributes:

• **glossary** (**optional**). The default glossary in which the names of the itemStatistics are defined. Data type = uri.Type

Elements:

Members of itemStatistic.ElementGroup

4.259 <usageDataVocabulary>

Description: Profile flag for usage-data files.

Context:

• Occurs [*] within bankProfile

4.260 <value>

Description: A single data value from one of the base-types.

Context:

- Occurs [1..*] within correctResponse
- Occurs [1..*] within defaultValue
- Occurs [1] within ordinaryStatistic

Attributes:

- **fieldIdentifier** (**optional**). Data type = identifier.Type
- **baseType** (**optional**). Data type = baseType.Type

4.261 <var>

Description: Defined by XHTML

Context:

See:

- flow.ElementGroup
- flowStatic.ElementGroup
- inline.ElementGroup
- inlineStatic.ElementGroup
- objectFlow.ElementGroup

Attributes:

- **id** (**optional**). Data type = identifier. Type
- **class** (**optional**). Data type = list of styleclass. Type

- xml:lang (optional).
- **label** (**optional**). Data type = string256.Type

Elements:

- Members of inline.ElementGroup
- PCDATA

4.262 <variable>

Description: A simple expression returning the value of an item variable

Context:

See:

• expression.ElementGroup

Attributes:

• **identifier** (**required**). Data type = identifier. Type

4.263 variableDeclaration.ElementGroup

Group members: <outcomeDeclaration>, <responseDeclaration>, <templateDeclaration>

Context:

Not applicable.

4.264 view.Type

One of the following symbolic values:

- author
- candidate
- proctor
- scorer
- tutor

About This Document

Title	IMS Question and Test Interoperability XML Binding		
Editor	Steve Lay (University of Cambridge)		
Version	2.0		
Version Date	24 January 2005		
Status	Final Specification		
Summary	This document describes the QTI XML Binding specification.		
Revision Information	24 January 2005		
Purpose	This document has been approved by the IMS Technical Board and is made available for adoption.		
Document Location	http://www.imsglobal.org/question/qti v2p0/imsqti bindv2p0.html		

To register any comments or questions about this specification please visit: http://www.imsglobal.org/developers/ims/imsforum/categories.cfm?catid=23

IMS Global Learning Consortium, Inc. ("IMS/GLC") is publishing the information contained in this IMS Question and Test Interoperability XML Binding ("Specification") for purposes of scientific, experimental, and scholarly collaboration only.

IMS/GLC makes no warranty or representation regarding the accuracy or completeness of the Specification.

This material is provided on an "As Is" and "As Available" basis.

The Specification is at all times subject to change and revision without notice.

It is your sole responsibility to evaluate the usefulness, accuracy, and completeness of the Specification as it relates to you.

IMS/GLC would appreciate receiving your comments and suggestions.

Please contact IMS/GLC through our website at http://www.imsglobal.org
